

How to – Using Mobile Hotspot on iPhone

1. Tap on “Settings”

2. Tap on “Personal Hotspot”

3. Use the slider to toggle your Personal Hotspot on and off. Looking at the screenshot below this iPhone is broadcasting a wireless network named “iPhone”, this is the Wi-Fi network you would connect to from your tablet. When attempting to connect your tablet will prompt for the Wi-Fi password. The Wi-Fi password is auto generated, you can change it to something simpler by tapping on it.

If the “Personal Hotspot” option is missing from your Settings or takes you to a Verizon webpage for activation this means the feature has not been enabled yet. Please contact IT Service Desk at servicedesk.nsm-seating.com or by phone at 866.457.1254.
