How to sign onto VPN

The VPN Cisco AnyConnect Secure Mobility Client is used for providing access to NSM resources (WNSM & RehabAdvisor) when you are outside the branch with your tablet or laptop. When booting up a tablet it will automatically prompt to connect to VPN, so if you are in the branch you can dose the windows and continue using your computer. If you are outside of the office, you will need to type in your password and click ok. (Must be connect to internet)

If you are in the branch there is no need to use VPN.

If you only need access to check email, there is no need to connect to VPN. Only if you are needing NSM resources (WNSM & RehabAdvisor).
